

Experiment 1

Student Name: Amrit Singh UID: 23BCS12931

Branch: CSE Section/Group: KRG_2B

Semester: 5th Date of Performance: 12/08/25

Subject Name: PBLJ Subject Code: 23CSH-304

1. Aim:

To design and implement Java programs for analyzing strings, performing matrix operations, and simulating a basic banking system using object-oriented concepts.

• Part A – Easy Level:

• To analyze a user-input string and count vowels, consonants, digits, and special characters.

• Part B – Medium Level:

• To implement matrix operations (addition, subtraction, multiplication) with validation of dimensions.

• Part C – Hard Level:

• To create a basic banking system with account creation, deposit, and withdrawal functionalities ensuring no overdraft.

2. Objective:

- ✓ To understand string manipulation and character classification in Java.
- ✓ To apply conditional statements for analyzing vowels, consonants, digits, and special characters.
- ✓ To implement multidimensional arrays and validate dimensions for performing matrix operations.
- \checkmark To apply nested loops for addition, subtraction, and multiplication of matrices.
- ✓ To design and implement a basic banking system using object-oriented programming concepts.
- ✓ To strengthen Java programming skills in strings, arrays, and object-oriented design.
- ✓ To encapsulate account details and ensure safe deposit and withdrawal operations with overdraft protection.

3. JAVA script and output:

EASY-LEVEL PROBLEM

```
import java.util.Scanner; public class
StringAnalysis {
  public static void main(String[] args) { Scanner
     sc = new Scanner(System.in);
     System.out.print("Enter a string: "); String str
     = sc.nextLine();
     int vowels = 0, consonants = 0, digits = 0, special = 0; str =
     str.toLowerCase();
     for (int i = 0; i < str.length(); i++) { char ch =
       str.charAt(i);
       if ("aeiou".indexOf(ch)!=-1) { vowels++;
       } else if (ch >= 'a' && ch <= 'z') {
          consonants++;
       } else if (ch >= '0' && ch <= '9') { digits++;
       } else if (ch != ' ') { special++;
     }
     System.out.println("Vowels: " + vowels);
     System.out.println("Consonants: " + consonants);
     System.out.println("Digits: " + digits);
     System.out.println("Special Characters: " + special);
}
```

Output:

```
Output

Enter a string: hiee tanisha 123!

Vowels: 6

Consonants: 5

Digits: 3

Special Characters: 1

=== Code Execution Successful ===
```

Figure 1:Easy Problem Output

MEDIUM LEVEL PROBLEM:

```
import java.util.Scanner;
public class MatrixOperations {
  public static void main(String[] args) {
    Scanner sc = new Scanner(System.in);
    System.out.print("Enter rows and columns for Matrix A: ");
    int r1 = sc.nextInt(), c1 = sc.nextInt();
    System.out.print("Enter rows and columns for Matrix B: ");
    int r2 = sc.nextInt(), c2 = sc.nextInt();
    int[][] A = new int[r1][c1];
    int[][] B = new int[r2][c2];
    System.out.println("Enter elements of Matrix A:");
    for (int i = 0; i < r1; i++)
       for (int j = 0; j < c1; j++)
         A[i][j] = sc.nextInt();
    System.out.println("Enter elements of Matrix B:");
    for (int i = 0; i < r2; i++)
       for (int j = 0; j < c2; j++)
         B[i][j] = sc.nextInt();
    if (r1 == r2 \&\& c1 == c2) {
       System.out.println("Addition:");
       for (int i = 0; i < r1; i++) {
```

```
for (int j = 0; j < c1; j++)
          System.out.print((A[i][j] + B[i][j]) + " ");
       System.out.println();
     System.out.println("Subtraction:");
     for (int i = 0; i < r1; i++) {
       for (int j = 0; j < c1; j++)
          System.out.print((A[i][j] - B[i][j]) + " ");
       System.out.println();
  } else {
     System.out.println("Addition and Subtraction not possible");
  }
  if (c1 == r2) {
     System.out.println("Multiplication:");
     int[][] result = new int[r1][c2];
     for (int i = 0; i < r1; i++) {
       for (int j = 0; j < c2; j++) {
          for (int k = 0; k < c1; k++)
            result[i][j] += A[i][k] * B[k][j];
          System.out.print(result[i][j] + " ");
       System.out.println();
     }
  } else {
     System.out.println("Multiplication not possible");
  }
}
```

Output:

```
Output
Enter rows and columns for Matrix A: 2 2
Enter rows and columns for Matrix B: 2 2
Enter elements of Matrix A:
4 5 2 1
Enter elements of Matrix B:
4 2 1 7
Addition:
8 7
3 8
Subtraction:
0 3
1 -6
Multiplication:
21 43
9 11
=== Code Execution Successful ===
```

Figure 2:Medium Level Output

HARD LEVEL PROBLEM

```
import java.util.Scanner;
class BankAccount {
    private String name;
    private String accNumber;
    private double balance;

public BankAccount(String name, String accNumber, double balance) {
        this.name = name;
        this.accNumber = accNumber;
        this.balance = balance;
    }

public void deposit(double amount) {
    balance += amount;
    System.out.println("Deposit successful! Current Balance: " + balance);
```

```
}
  public void withdraw(double amount) {
    if (amount <= balance) {</pre>
      balance -= amount;
      System.out.println("Withdrawal successful! Current Balance: " + balance);
    } else {
      System.out.println("Error: Insufficient funds. Current Balance: " + balance);
    }
  }
}
public class BankingSystem {
  public static void main(String[] args) {
    Scanner sc = new Scanner(System.in);
    System.out.println("Create Account:");
    System.out.print("Name: ");
    String name = sc.nextLine();
    System.out.print("Account Number: ");
    String accNo = sc.nextLine();
    System.out.print("Initial Balance: ");
    double bal = sc.nextDouble();
    BankAccount account = new BankAccount(name, accNo, bal);
    System.out.print("Enter amount to Deposit: ");
    double dep = sc.nextDouble();
    account.deposit(dep);
    System.out.print("Enter amount to Withdraw: ");
    double wd = sc.nextDouble();
    account.withdraw(wd);
  }
}
```

Output:

```
run:
Create Account:
Name: Tanisha
Account Number: 12542
Initial Balance: 1000000
Enter amount to Deposit: 500000
Deposit successful! Current Balance: 1500000.0
Enter amount to Withdraw: 54000
Withdrawal successful! Current Balance: 1446000.0
BUILD SUCCESSFUL (total time: 30 seconds)
```
